

# Compressor Service Techniek

CST was founded in 1988 from a small garage in Wierden. The demand for, among other things, high-pressure compressors and the knowledge of this turned out to be so great that CST quickly grew from a small sole proprietorship into a comprehensive specialist in compressors. With almost 40 years of experience and knowledge in the field of high and low pressure, we work every day to achieve the optimum result. We guarantee quality, durability and service.

## Our core activities

- Service and maintenance for all brands of compressors
- Maintenance of complete compressed air installations and accessories
- Installation of complete compressed air systems
- All kinds of piping for every application
- Turn-key delivery of complete engine rooms
- Advice on inspections and PED (guideline for pressure equipment and systems)
- Delivery of new and used machines and parts from our extensive stock
- Rental of complete installations, compressors and accessories
- Monitoring of filtration and air quality according to various standards
- Delivery and maintenance of various types of vacuum pumps

## Offer maintenance agreements

At Compressor Service Techniek we offer suitable maintenance agreements.

When you have a (new) compressor installation, you naturally want to be assured of quality and service. Failure of your compressor often has major consequences for your production process, requiring you to repair quickly and professionally want to be helped. There are various options for maintaining your machine. You can determine the coverage and therefore the degree of certainty yourself. In every agreement you are entitled to 24/7 service, you are assured of the help of compressor specialists and we do everything we can to get the installation up and running again as quickly as possible. In addition to assistance in the event of a malfunction or defect, annual maintenance is carried out on your compressor.

Maintenance is extremely important so that the performance of your installation will be optimal and there is as little chance of malfunctions or defects as possible.

For maintenance, think of changing oil and filters, checking for leaks in the air pipe system and buffer cylinders, replacing parts if necessary, checking related components such as refrigerant dryers and compressed air tanks.

## Rental concept

Are you looking for an addition to your current equipment, a temporary replacement or are you starting a project where you need a specific compressor or compressed air installation? Then we are happy to help you with our rental concept Easy Care. You can rent everything you need from us according to your own wishes. Think of compressors, refrigeration dryers, compressed air tanks, buffer cylinders, etc.

We also take care of the inspection and maintenance of the rented equipment for you. The inspection and maintenance is carried out on the entire installation, the piping system is also checked for damage and leaks so that the installation loses as little pressure as possible. Maintenance is carried out in accordance with factory specifications and adapted to the environment and/or user conditions. In addition to a mounted installation, we also have a trailer available for rental. We can furnish this completely with the installation you want. Our technicians set up the trailer according to your wishes so that it can be used at any desired location. Ideal for projects that are temporary and require proper installation.

## Our brands

In the field of high pressure, CST is the only Bauer supplier in the Netherlands authorized to compressors to build. As a Bauer A partner, we can handle your equipment and/or installation adapt to your wishes and needs.

**Bauer**

With our own brand Vosair we can distinguish ourselves within the low pressure sector. With our years long experience, we are able to offer a wonderful range in the field of compressed air to produce quality products. Our Vosair range includes screw compressors, reciprocating compressors and refrigeration dryers. In addition, we have selected the best parts for one high-quality and reliable pipeline network.

**Vosair**

In addition to Vosair and Bauer, we import several brands of compressors to guarantee a complete range. With our expertise, we supply, assemble and repair all types of compressors. Our strength lies in the provision of safe compressed air, both industrial and breathing air.

## Vosair piping system

Our pipe network from VOSAIR is the most effective solution for your air or gas network.

The quick and easy installation will get you up and running in record time. This pipe network is often used in industry.

We install pipes in the food industry, shipbuilding, computer industry, agriculture, metal industry and the chemical industry.

The VOSAIR piping network is suitable for low pressure up to 16 Bar.

The VOSAIR network is leak-proof and corrosion-free. The pipes and fittings come with a 10-year warranty with annual inspection and maintenance. The advantage is that it is a reusable pipe network, designed in accordance with EN 13480-3 for a fast, simple and reliable distribution network for compressed air, nitrogen, vacuum and other slow gases. Our pipe network has various industrial certifications and offers the highest safety and security standards quality level.

# We want to share our knowledge!

## COURSE AUTHORIZED PERSON

The course *authorized person* training has been specially developed for service providers who are too have to do with high-pressure compressed air cylinders. Think of professional divers, firefighters and diving associations. Industry guidelines have stipulated that every individual who is involved in (re)filling high pressure compressed air cylinders must first receive theoretical and practical instruction and must obtain the authorized person certificate.

We start with the basic concepts of breathing air and consider the breathing air installation. We cover, among other things, the high-pressure compressor, the parts and consumables that ensure safety and clean ensure breathing air. The dangers of filling compressed air cylinders are often not recognised. During this course we want to make you aware of the risks that improper working can entail and how to do it adequately deals with high-pressure installations. We are going to talk about the legislation, control procedures and risks that come with the use of a breathing air system. You will become additional in practice instructed so that you know how to fill the compressed air cylinders in a safe way.

*The certificate is valid for 3 years. Non-compliance with this instruction, as well as unauthorized or improper use of the high-pressure breathing air filling installation, as well as non-compliance with the specific instructions for use belonging to the high-pressure breathing air filling installation, can lead to damage, serious injury or, in the most serious case, even fatal consequences. CST expressly disclaims all liability for any damage, personal injury, consequential loss or damage resulting from the foregoing.*
